

TRUE TO LIFE WATER PURIFIERS

Continuous filtered water straight from a tap. These long life systems utilise large, long lasting micron mesh filters. Ideal for home, office or travel. Well established technology for great tasting water.

FOR HOME OWNERS:

We generally recommend the Twin Undersink Water Purifier. Water first passes through a Sediment filter to remove larger particles, followed by a carbon filter that removes 99% of chlorine, colour, taste, odour, and cysts such as giardia and

cryptosporidium. The system delivers purified water on demand through a separate tap. Since the filters are under your sink they will not clutter your bench space.

FOR RENTERS AND TRAVELLERS:

We recommend the Counter Top Water Purifier. Water passes through a single mesh carbon filter that removes 99% of chlorine, colour, taste, odour, and cysts such as giardia and cryptosporidium. The system delivers purified water on demand through a separate tap. This portable water purifier is ideal for people on the move.

Floor Cleaner (1L)	\$6.50	\$7.50	\$170

ECO-BOKASHI

This unit uses fermentation to recycle food waste into a nutrient rich soil conditioner. This practical recycling bucket eliminates the need for an outside composting pile and is easier to maintain than worm farms. Simply fill the container with your food scraps, and sprinkle a light layer of Eco Bokashi (fermented grain mixture). 1kg of Bokashi mixture lasts approximately 4 weeks. The unit can be placed under the kitchen sink or other convenient locations and is a perfect size for household or office green waste recycling. It takes 3-4 weeks for the bucket to fill, by which time the contents should be fully fermented.

Fermenting versus Composting

Fermented waste retains all of the energy (no heat loss) and most of the nutrients in the waste, so all this material is available to your plants. Greenhouse gas emissions are greatly reduced during fermentation, and there are no insect or rodent problems. This system will also tolerate citrus, meat and onions.

MICRO-FIBRE CLOTHS

Micro-fibre yarn can work in two ways. When it is dry it electrostatically attracts particles. Alternatively when the cloth is damp it picks up moisture, grease and dirt through absorption or capillary action.

- Environmentally friendly, less pollution, less waste
- CHEMICAL FREE cleaning
- Economical- saves you money- no more chemicals, cleaners, sponges and brushes
- Effective against oil, grease and household dirt
- Highly absorbent
- Easy to clean and maintain
- Excellent for people with allergies or asthma
