

August 2005

Brief Profile and Recent Project Summary

Going Solar was established in 1978 and has considerable experience in ESD including:

- Specialist knowledge of renewable energy systems.
- Project management experience.
- An ability to accelerate the uptake of renewable energy by working co-operatively with other organisations.

Going Solar takes on two roles:

- Supplying or assisting in the procurement of a range of technologies through our **Product Division**.
- Providing a range of innovative concepts and cost-effective options through our **Projects Consulting Division**

Going Solar Major Projects Consulting specialises in sustainable design, renewable energy, energy and water efficiency and sustainable transport options for a wide range of applications.

Key technologies and skills include:

- **Solar thermal panels** for the provision of reticulated hot water for domestic or commercial use;
- **Solar air heating/cooling modules** to assist in space heating;
- **Solar chimneys** for ventilation and for healthy buildings;
- the use of **vegetation as insulation**;
- **Photovoltaic modules** in grid-interactive systems, building integrated systems or as remote area power systems for specific tasks;
- flywheel-driven **light tram system** which potentially can be PV powered;
- **ESD design** from domestic dwellings to 'green villages' to major projects.

Yours sincerely,

Stephen Ingrouille
General Manager
