

Online

by ENASOLAR

- *Generate graphical reports from grouped or specific individual installation data.*
- *Access by computer and other web based devices.*
- *No additional hardware, software or wiring required at installation.*
- *Wi-fi based and fully inclusive with each inverter.*

Online is our web based PV system monitoring and reporting tool that is available as standard to all EnaSolar inverter distributors and their installers.

Once registered individual users are able to login to this internet based facility using their computer, smart phone or other web accessible devices.

From the home screen you can view daily statistics and location information for all of your installations.

Retrieve data and generate reports on grouped or specific individual inverter performance.

Visibility of installations by all parties allows a quick response for service.

Accessible from all web based devices such as PCs, smart phones and iPads.

For more details about this exciting new tool simply contact us today by visiting our website at the link below.
