

Tigo Energy Monitoring Packages

Summary:

Tigo Energy provides premium monitoring services to customers with Tigo Energy optimizers on their solar arrays. These monitoring services allow module-level visibility and provide insight into the performance of any system. Tigo Energy offers three levels of monitoring access that enable customers to pick a monitoring package tailored to their specific site needs. Each package is available on Tigo Energy's website through the customer monitoring portal.

Operations & Maintenance

Generate savings by making maintenance faster, cheaper and more efficient. Spot problems immediately and eliminate the need for expensive on-site testing.

Dynamic Viewing Capabilities

At the click of a button - graphically display voltage, current and power.

Highly Compatible Interface

Easily integrates with Modbus light sensors, temperature sensors and other environmental data acquisition tools, as well as revenue grade AC meters.

Customizable Homepage

Give your monitoring a look as unique as you. Customize your array homepage with images of your system and your preferred settings.

Share Your System

Share your solar array's performance with friends and family. Show how much energy your solar installation is producing as well as how much carbon you are offsetting.

API access			●

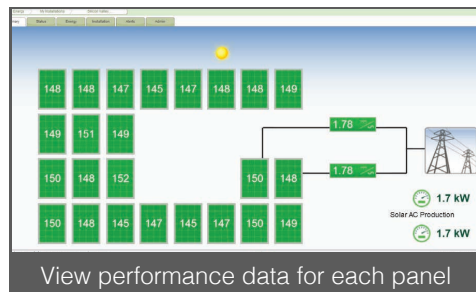

Tigo Energy Monitoring Packages

Tigo Energy offers three levels of monitoring packages to cater to the needs of your specific site.

Module-level

Tigo Energy's module-level monitoring package provides a basic view of energy production, ideal for residential customers or customers who want to be able to view current energy harvest data. This monitoring package includes access to:

- Recent history of energy harvest data pulled at 1 minute intervals
- Energy production at the module-level for specified time period
- Site information (panel and inverter types, manufacturers and numbers)
- Summary page detailing site layout and current harvest information

Advanced

With Tigo Energy's Advanced monitoring you receive all the benefits of module-level monitoring and can receive customizable alerts and reports for your system. This package increases safety and improves maintenance by immediately notifying owners and plant operators of any issues. This package includes:

- All the benefits of the module-level monitoring package
- Complete history of energy harvest data at 2 second intervals
- Safety and performance alerts via email or SMS
- Consolidated system faults and alerts on one page for easy reference
- Monthly production reports

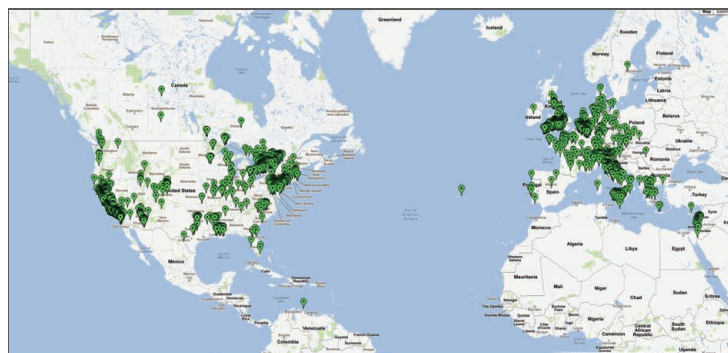

Alerts via text message or email

Pro

Tigo Energy's Pro management platform is the perfect solution for customers with multiple solar installations and installers responsible for system performance. This premium service allows access to all of Tigo Energy's monitoring and alert capabilities as well as fleet management capacities. Pro management customers will have access to:

- All the benefits of both Module-level monitoring package as well as the Advanced monitoring features
- Fleet management tools
- API for custom reporting
- Dashboard displaying environmental impact
- Latest software releases and monitoring tools
- Kiosk feature for public displays
- Google Maps integration

Manage your entire fleet from a single console
